Style Specification

This task is about specifying the style for your website

2. Colours Fonts and Text styles and global images

- If you have a banner on every page provide a design for it

- A screenshot of your colour palette from colorblender.com showing the colours your site will use and the reason(s) why you consider these choices to be valid.

- Which colours will be used where on your website produce a mock up of a page in fireworks you should be able to modify your grey box template for this put any old content in for now.

- If you are using text links. Detail the size and colour for links which are active and visited and say whether they will be underlined or not.

- If you are using images or rollovers as links provide designs

- The fonts, font sizes in pixels and weights of font you will use or headings content and links.

- Any padding to be used to pull text or images away from the edges of Divs

- Any borders to be used on divs within the site

- Define Heading and Sub heading text styles. Quote font, colour and font weight.
